

WIRE MANAGEMENT

DCE SOLAR OFFERS UNMATCHED WIRE MANAGEMENT WITH THEIR GROUND MOUNTED SOLUTIONS

Our Contour and Long Span ground mount systems neatly nest home run wires in the east/west purlin and can be secured using UV-rated zip ties, sun bundlers, or other wire management solutions, with strategic weep holes aligning with the module mounting holes on the lower flange for bundling. Wires are protected from UV exposure as they are positioned underneath the PV panels. We use button head cap screws for attaching our beam straps to the purlin to prevent wire chafing. This thoughtful design guarantees that wires remain safely nested, reducing the risk of wear and tear.
