

# WIRE MANAGEMENT

## DCE SOLAR OFFERS UNMATCHED WIRE MANAGEMENT FOR THE ECO-TOP ROOF-TOP SOLUTION

Our EcoTop rooftop system neatly nests home run wires in our north/south beams. Wires are protected from UV exposure as they can be run underneath the PV panels. Installers use split loom edge protectors (optionally supplied by DCE) in 6" lengths across the wire cover to protect wire from being cut during installation. Additionally, we use button head cap screws for attaching our ballast pads to the north/south beam to prevent wire chaffing.

This thoughtful design guarantees that wires remain safely nested, reducing the risk of wear and tear.
